### **DETAILED ACTION**

In view of the arguments in the Appeal Brief filed on 11 July 2007 (see pages 2-4), PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hedman et al. (4,759,769; of record).

Hedman et al. disclose various embodiments of a multiaxial artificial disc replacement comprising a lower component, 28, adapted for fixation to an inferior vertebral body, at 64, an upper component, 26, adapted for fixation to a superior vertebral body, at 46, and an axle 66, 68 that allows movement between the lower and upper components along only two separate, independent orthogonal axes, and wherein one of the axes is generally medial-lateral and the other axis is generally anterior-posterior (see figures 1, 2, 6 and 7 and column 4, lines 22-64, and column 5, lines 34-35). The axle 66, 68 comprises a generally cruciate-shaped cross-sectional shape defined by protrusions extending along orthogonal axes (see Figure A below).

**Figure A**

Claims 1-3 are rejected under 35 U.S.C. 102(a) and (e) as being anticipated by Bunn (US 2003/0105531).

Bunn refers to a Curtis universal joint, CJ647, which comprises upper and lower components capable of being fixed to vertebral bodies and a cruciate-shaped axle that allows movement between the components only along two separate, independent, orthogonal axes. The axes run medial-lateral and anterior-posterior. (*cf.* Curtis Universal Joint Company--see attached web page).

### ***Response to Arguments***

Applicant's argument in the Appeal Brief pertaining to the previous grounds of rejection were fully considered and were persuasive. However, prosecution has been reopened to apply new grounds of rejection.

### ***Conclusion***

The prior art made of record and not directly relied upon is also considered pertinent to applicant's disclosure.
